Art Unit: 1616

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, drawn to a method of reducing an unsaturated alkyl ketone substituent attached to a fused ring base, classified in class 552, subclass 502.
- II. Claims 5-11, drawn to a method of reducing an unsaturated alkeneone substituent attached to a fused ring base, classified in class 552, subclass 502.
- III. Claims 12-18, drawn to a method of reducing an unsaturated alkynenone substituent attached to a fused ring base, classified in class 552, subclass 502.
- IV. Claims 19-34, drawn to an intermediate composition comprising a steroid, classified in class 552, subclass 502.
- V. Claims 35-40, drawn to an intermediated composition comprising a steroid, classified in class 552, subclass 502.
- VI. Claims 41-53, drawn to a method of producing an aminosterol, classified in class 552, subclass 502.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation.

Because these inventions are distinct for the reasons given above and the search required for Groups I-VI is different, restriction for examination purposes as indicated is proper. A reference reading on one Group may not read on all Groups.

This application contains claims directed to the following patentably distinct species of the claimed invention: Numerous compounds in each invention.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, a method of reducing several compounds is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected (elect a single specific and completely defined compound for the group elected) consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record

Art Unit: 1616

showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Dr. Lowen on 10/3/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
